

Flutter:-4

- Go from one screen to another:

First we use stateful widget.

Main.dart:-

```
import 'package:flutter/material.dart';
import 'package:second_app/p1.dart';

void main() {
  runApp(MaterialApp(
    home: Scaffold(
      backgroundColor: Color.fromARGB(255, 66, 0, 99),
      body: p1(),
    )),
  );
}
```

p1.dart:-

```
import 'package:flutter/widgets.dart';
import 'package:second_app/c1.dart';

class p1 extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    // TODO: implement build
    return c1();
  }
}
```

c1.dart:-

```
import 'package:flutter/material.dart';
import 'package:flutter/widgets.dart';
import 'package:second_app/c2.dart';

class c1 extends StatefulWidget {
  const c1({super.key});

  @override
  State<c1> createState() => _c1State();
}
```

```

class _c1State extends State<c1> {

    void switchscren() {
        setState(() {
            Navigator.push(context, MaterialPageRoute(builder: (context)
=> c2()));
        });
    }

    @override
    Widget build(BuildContext context) {
        // TODO: implement build
        return Center(
            child: Column(
                mainAxisAlignment: MainAxisAlignment.center,
                children: [
                    Image.asset(
                        "assets/image/i1.jpg",
                        width: 300,
                    ),
                    SizedBox(height: 20),
                    Text(
                        "woodie",
                        style: TextStyle(fontSize: 30, color: Colors.white),
                    ),
                    OutlinedButton.icon(
                        onPressed: switchscren,
                        icon: Icon(
                            Icons.arrow_circle_left,
                            color: Colors.white,
                        ),
                        label: Text(
                            "click",
                            style: TextStyle(color: Colors.white),
                        ))
                ],
            ),
        );
    }
}

```

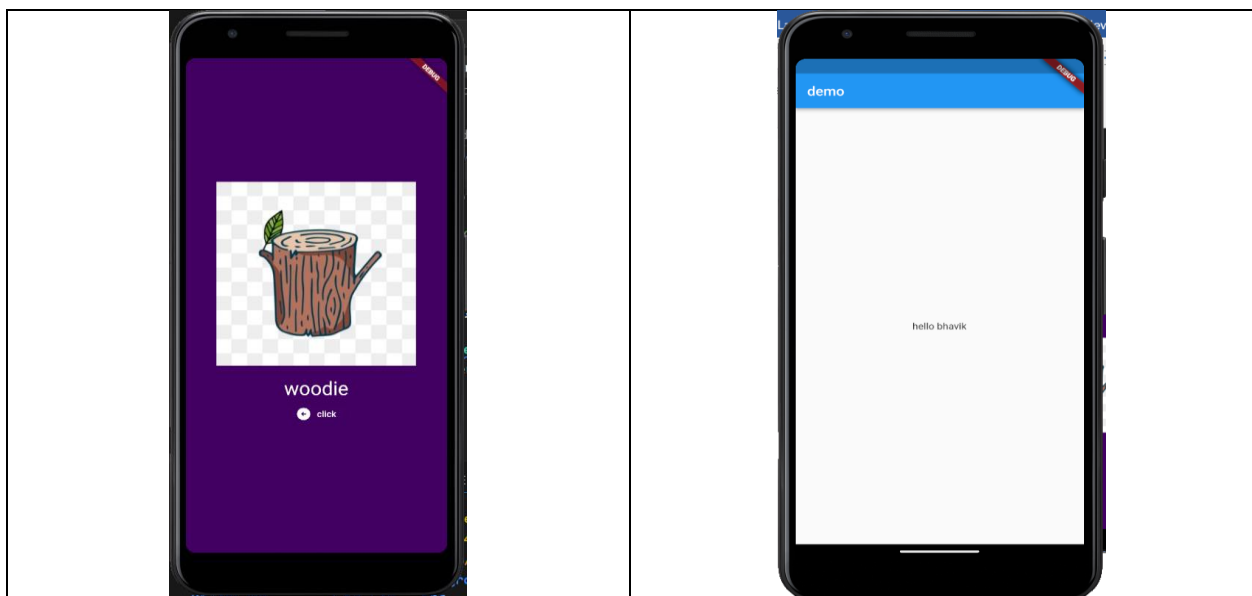

c2.dart:-

```
import 'package:flutter/material.dart';

class c2 extends StatefulWidget {
  const c2({super.key});
  @override
  State<StatefulWidget> createState() {
    // TODO: implement createState
    return _c2();
  }
}

class _c2 extends State<c2> {
  @override
  Widget build(BuildContext context) {
    // TODO: implement build
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(
          title: Text("demo"),
        ),
        body: Center(child: Text("hello bhavik")),
      ));
  }
}
```

Output:-

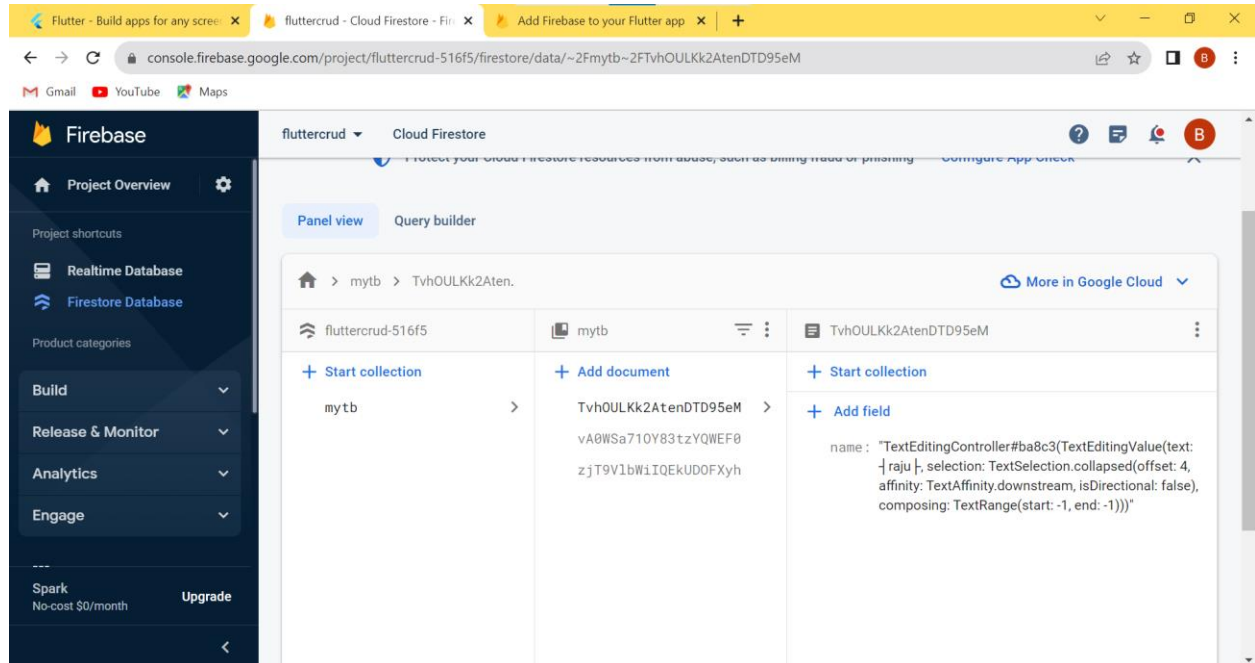

Connection with firebase:-

- Use following link for download dependency and official documentation of firebase:-

<https://firebase.google.com/docs/flutter/setup?platform=android>

create a collection in firestore.

c2.dart:-

```
import 'package:cloud_firestore/cloud_firestore.dart';
import 'package:flutter/material.dart';

class c2 extends StatefulWidget {
  const c2({super.key});
  @override
  State<StatefulWidget> createState() {
    // TODO: implement createState
    return _c2();
  }
}

class _c2 extends State<c2> {
  var t1 = TextEditingController();
```

```

CollectionReference cf = FirebaseFirestore.instance.collection("mytb");
void onclick() {
  cf.add({"name": t1.text.toString()});
  print("upload");
}

@override
Widget build(BuildContext context) {
  // TODO: implement build
  return MaterialApp(
    home: Scaffold(
      appBar: AppBar(
        title: Text("demo"),
      ),
      body: Center(
        child: Padding(
          padding: const EdgeInsets.all(10),
          child: Column(
            mainAxisAlignment: MainAxisAlignment.center,
            children: [
              Text("Enter text"),
              SizedBox(
                height: 20,
              ),
              Container(
                decoration: BoxDecoration(
                  borderRadius: BorderRadius.circular(20),
                  color: const Color.fromARGB(255, 219, 216, 216)),
                child: Padding(
                  padding: const EdgeInsets.all(20),
                  child: TextField(
                    controller: t1,
                    decoration: const InputDecoration(
                      enabledBorder: OutlineInputBorder(
                        borderSide: BorderSide(color: Colors.white)),
                      focusedBorder: OutlineInputBorder(
                        borderSide: BorderSide(color: Colors.black)),
                    ),
                  ),
                ),
              OutlinedButton.icon(
                onPressed: onclick,
                icon: Icon(Icons.holiday_village),
                label: Text("save"))
            ],
          ),
        ),
      ),
    ),
  );
}

```

```
    ],  
  ),  
)),  
));  
}  
}
```

Main.dart

```
import 'package:firebase_core/firebase_core.dart';  
import 'package:flutter/material.dart';  
import 'package:second_app/firebase_options.dart';  
import 'package:second_app/p1.dart';  
  
void main() async {  
  WidgetsFlutterBinding.ensureInitialized();  
  await Firebase.initializeApp(options: DefaultFirebaseOptions.currentPlatform);  
  runApp(MaterialApp(  
    home: Scaffold(  
      backgroundColor: Color.fromARGB(255, 66, 0, 99),  
      body: p1(),  
    )),  
  ));  
}
```

Add async and await in main method

Output:-
